

Pilotto, L.S., and Douglas, R.M., "Indoor Nitrogen Dioxide and Childhood Respiratory Illness," Aust J Public Health 16: 245-250, 1992.

The authors of this review paper examine "the available evidence of this association and explore methodological issues in measurement of nitrogen dioxide exposure -- misclassification of subjects, symptom bias and confounding." The authors suggest that additional research, using personal monitoring and prospective data collection techniques, be conducted before any definitive conclusions can be drawn.
